## Validation Testing

This collection of test cases is meant to check if we have fulfilled the functional requirements for the program at a high level. They are validating that we have met the required functions for the application. To accomplish this we have to manually check through the screens of the application to ensure that we have all the needed functions. As the level of abstraction for these tests is high, we have to manually check the requirements. We cannot automate these tasks as they are abstracted from the underlying code, thus we cannot use JUnit tests to verify that we have met all the requirements. Each of these test cases verifies that we have met an individual functional requirement. They are meant to check that the overall code implements everything it is meant to. Testing for the non-functional requirements is more subjective and thus was not included in the validation testing. To test the non-functional requirements we would have to rely on feedback from the users of the game. We cannot test if our game is easy to use and educational. We would need to have the target audience use it and provide feedback to test these things. We have done our best to implement the non-functional requirements as we implemented each of these functional requirements. But, due to their subjective nature, we did not find it appropriate to have tests to verify their implementation. Thus, the tests focus only on verifying that we have implemented each of the functional requirements outlined in the requirements documentation.

Test Case Name	GUI Mouse responsiveness
Test Case Description	This test case is meant to test if the GUI responds to mouse inputs given by the user.
Test Steps	<ol style="list-style-type: none"><li>1. Log in to the game.</li><li>2. Navigate through the GUI using the mouse as the input device.</li><li>3. Observe the response of the program to mouse inputs.</li></ol>
Pre-Requisites	The program must be booted up to be able to verify that the GUI responds to mouse inputs. The user must have an account to access the program.
Expected Results	As the user uses the mouse to provide input to the program, the program will respond to the inputs. This can manifest in a few different ways. The program may make a sound to make it obvious that the button has been pressed. Alternatively, the screen of the GUI might change as the user navigates through the various screens.
Test Category	Validation Testing
Requirement	Functional requirement <ol style="list-style-type: none"><li>1. Graphical user interface</li><li>2. The GUI is mouse-based so that the user can click on buttons/ text boxes to navigate the different menus and progress through gameplay.</li></ol>
Automation	Manual
Date Run	30 Mar 2024
Pass /Fail	Pass
Test Results	The GUI responds to mouse inputs.
Remarks	The GUI smoothly responds to mouse inputs. This function works as intended.

Test Case Name	GUI Keyboard Responsiveness
Test Case Description	This case tests if the GUI responds to keyboard inputs.

<b>Test Steps</b>	<ol style="list-style-type: none"> <li>1. Log in to the game.</li> <li>2. Navigate through the GUI using keyboard inputs</li> </ol> <p>2. Observe if the response from the GUI is as intended.</p>
<b>Pre-Requisites</b>	The program must be booted up to be able to verify that the GUI responds to keyboard inputs. The user must have an account to access the program.
<b>Expected Results</b>	As the user uses the keyboard to provide input to the program, the program will respond to the inputs. This can manifest in a few different ways. The program may make a sound to make it obvious that the button has been pressed. Alternatively, the screen of the GUI might change as the user navigates through the various screens.
<b>Test Category</b>	Validation Testing
<b>Requirement</b>	Functional requirement <ol style="list-style-type: none"> <li>1. Graphical user interface</li> <li>2. There are alternative keyboard shortcuts that allow the user to access different menus/ features directly.</li> </ol>
<b>Automation</b>	Manual
<b>Date Run</b>	30 Mar 2024
<b>Pass /Fail</b>	Fail
<b>Test Results</b>	The GUI does not respond to keyboard inputs.
<b>Remarks</b>	We ran out of time to implement keyboard inputs, the program does not respond to them as originally intended.

<b>Test Case Name</b>	GUI Screens Test
<b>Test Case Description</b>	This test is to check that the GUI has all the desired screens included. These elements also have to be easily accessible. It must be obvious how to navigate through the different screens.
<b>Test Steps</b>	<ol style="list-style-type: none"> <li>1. Log in to the game.</li> <li>2. Navigate through the GUI using mouse inputs</li> <li>3. Ensure that all the desired screens are accessible and it is obvious how to get to them.</li> <li>4. Ensure that the back button works on each screen as they are navigated through.</li> </ol>
<b>Pre-Requisites</b>	The program must be booted up. The user must have an account to access the program.
<b>Expected Results</b>	All desired screens will be in the GUI. Each of them will be easy to find, and easy to return to the main menu from.
<b>Test Category</b>	Validation Testing
<b>Requirement</b>	Functional Requirement Graphical User Interface
<b>Automation</b>	Manual
<b>Date Run</b>	30 Mar 2024
<b>Pass/Fail</b>	Pass
<b>Test Results</b>	The GUI includes all the specified screens and navigation between them is smooth.
<b>Remarks</b>	The GUI looks as intended.

<b>Test Case Name</b>	Main Menu Elements Test
-----------------------	-------------------------

<b>Test Case Description</b>	This test case checks that all the desired elements are included in the main menu.
<b>Test Steps</b>	<ol style="list-style-type: none"> <li>1. Login to the game</li> <li>2. Check that all the desired elements are included in the main menu.</li> <li>3. These include name, logo, wallpaper, button to play the game, button to open the instructions, button to open the high-score screen, button to access the progression screen, button to open the settings, button to exit the game, and information about who created the game.</li> </ol>
<b>Pre-Requisites</b>	Boot the program up. The user must have an account to access the program.
<b>Expected Results</b>	All the listed elements are included in the main menu. They are all visible in the GUI.
<b>Test Category</b>	Validation Testing
<b>Requirement</b>	Functional Requirement Graphical User Interface Main Menu (Screen)
<b>Automation</b>	Manual
<b>Date Run</b>	29 Mar 2024
<b>Pass/Fail</b>	Pass
<b>Test Results</b>	The main menu includes all the specified elements.
<b>Remarks</b>	The menu has all the listed elements and there are custom graphics for them. The created art is properly shown in the GUI.

<b>Test Case Name</b>	Tutorial Screen Elements Test
<b>Test Case Description</b>	This test case checks that all the desired elements are included in the tutorial screen.
<b>Test Steps</b>	<ol style="list-style-type: none"> <li>1. Log in to the game.</li> <li>2. Navigate to the tutorial screen from the main menu screen.</li> <li>3. Check that the tutorial screen has the following elements; a button to return to the previous screen, a list of all mouse inputs, tips on how to interact with the gameplay screen, and a summary of how the game works.</li> </ol>
<b>Pre-Requisites</b>	The program must be booted up. The user must have an account.
<b>Expected Results</b>	The user will be able to navigate to the tutorial screen from the main menu. In the tutorial screen, they will see all the elements listed above. The screen will give a concise overview of how to use the program and play the game. They will be able to seamlessly navigate back to the main menu using the back button.
<b>Test Category</b>	Validation Testing
<b>Requirement</b>	Functional Requirement
<b>Automation</b>	Manual
<b>Date Run</b>	31 Mar 2024
<b>Pass /Fail</b>	Pass

<b>Test Results</b>	The tutorial screen contains all the specified elements.
<b>Remarks</b>	The screen gives a concise overview of how to use the application. It is effective at teaching the users how to use the application and play the game.

<b>Test Case Name</b>	Save Game Test
<b>Test Case Description</b>	Test that the game can save progression to a CSV file stored in a local folder.
<b>Test Steps</b>	<ol style="list-style-type: none"> <li>1. Login to or register an account.</li> <li>2. Navigate to the gameplay screen from the main menu.</li> <li>3. Play through the first level.</li> <li>4. Save the game on the 2nd screen.</li> </ol>
<b>Pre-Requisites</b>	The folder to store the CSV files has been created on the machine. The user can create an account and log in to the pre-existing account after. The program can create a CSV file to store the user data and the progression data.
<b>Expected Results</b>	The user can store their progression in the game. This is to allow the user to load back into their save at a later date. This will also allow the viewing of their progression on the progression screen.
<b>Test Category</b>	Validation Testing
<b>Requirement</b>	Functional Requirement Save And Load
<b>Automation</b>	Manual
<b>Date Run</b>	30 Mar 2024
<b>Pass/Fail</b>	Pass
<b>Test Results</b>	The program creates a CSV file and stores the data as expected.
<b>Remarks</b>	The saving of files works as intended.

<b>Test Case Name</b>	Load Game Test
<b>Test Case Description</b>	Test that the game can load progression from a CSV file stored in a local folder
<b>Test Steps</b>	<ol style="list-style-type: none"> <li>1. Login to or register an account.</li> <li>2. Press the continue/play button on the main screen</li> <li>3. Verify that the game has resumed at the point it was left, and hasn't gone back to the beginning.</li> </ol>
<b>Pre-Requisites</b>	The folder to store the CSV files has been created on the machine. The user can create an account and log in to the pre-existing account after. The program can create a CSV file to store the user data and the progression data.
<b>Expected Results</b>	The user can resume the game where they left off previously.
<b>Test Category</b>	Validation Testing
<b>Requirement</b>	Functional Requirement Save And Load
<b>Automation</b>	Manual
<b>Date Run</b>	30 Mar 2024
<b>Pass/Fail</b>	Pass
<b>Test Results</b>	The user can load their previously saved games and resume where they left off.
<b>Remarks</b>	The loading of files works as intended.

<b>Test Case Name</b>	High-Score Table Screen Test
<b>Test Case Description</b>	This test is to test that the integration of the high score table has been successful
<b>Test Steps</b>	<ol style="list-style-type: none"> <li>1. Login to or register an account.</li> <li>2. Navigate to the high score screen from the main menu by pressing the high score button.</li> <li>3. Verify that the correct elements are present on the screen.</li> <li>4. Verify that it is possible to navigate back to the main menu.</li> </ol>
<b>Pre-Requisites</b>	The program must be booted up. The user must have an account.
<b>Expected Results</b>	The user sees the following elements: the back button, the table shows the 5 highest scores in descending order, and each entry shows the name of the player and the score they achieved.
<b>Test Category</b>	Validation Testing
<b>Requirement</b>	Functional Requirement High Score Table (Screen)
<b>Automation</b>	Manual
<b>Date Run</b>	30 Mar 2024
<b>Pass/Fail</b>	Pass
<b>Test Results</b>	The screen contains all the desired elements and the back button works properly.
<b>Remarks</b>	The high score screen works as intended.

<b>Test Case Name</b>	Login Screen Test
<b>Test Case Description</b>	This test is to test that the integration of the Login Screen has been successful.
<b>Test Steps</b>	<ol style="list-style-type: none"> <li>1. Log in to or register an account after booting up the game.</li> <li>2. Ensure that both functions work. Either the user can use their already created account or make a new one.</li> </ol>
<b>Pre-Requisites</b>	The program must be booted up.
<b>Expected Results</b>	The user can either log in to their pre-existing account or create a new one based on their needs. A file is either read or created to facilitate this.
<b>Test Category</b>	Validation Testing
<b>Requirement</b>	Functional Requirement Multi-User Login (Screen)
<b>Automation</b>	Manual
<b>Date Run</b>	30 Mar 2024
<b>Pass/Fail</b>	Pass
<b>Test Results</b>	The user can access the login screen as it pops up when the game is booted. The user is then able to either register an account or log in to their existing account, as intended.
<b>Remarks</b>	The login screen works as intended.

<b>Test Case Name</b>	Teacher Mode Test
<b>Test Case Description</b>	This test is to test that the integration of Teacher Mode has been successful.

<b>Test Steps</b>	<ol style="list-style-type: none"> <li>1. Log in to the program using the username "teacher" and the secret password.</li> <li>2. Navigate to the progression screen through the main menu.</li> <li>3. Verify that the progression screen is different for the teacher, and they can view all the student's progression.</li> <li>4. Navigate back to the main menu.</li> <li>5. Start a game and verify that the teacher can access any level in the game regardless of whether they have played through it already.</li> </ol>
<b>Pre-Requisites</b>	The application has been launched. A special login for the teacher has been created with special permissions different from the normal student permissions.
<b>Expected Results</b>	The teacher can log in without having to create an account as they can use the special pre-existing account to access the game. After the teacher logs in they can access the progression screen and view the progression of all their students. They also can play any level in the game and check to ensure that the level is possible for their students to beat.
<b>Test Category</b>	Validation Testing
<b>Requirement</b>	Functional Requirement Teacher Mode
<b>Automation</b>	Manual
<b>Date Run</b>	31 Mar 2024
<b>Pass/Fail</b>	Pass
<b>Test Results</b>	We can log into the teacher's account and see the student's progression. We are also able to play any level we desire.
<b>Remarks</b>	Teacher mode works as intended and has all the required functions.

<b>Test Case Name</b>	Developer Mode Test
<b>Test Case Description</b>	This test is to test that the integration of Developer Mode has been successful.
<b>Test Steps</b>	<ol style="list-style-type: none"> <li>1. Log in to the game using the username "developer" and a secret password</li> <li>2. Access the crash reports from the main menu and verify that they're accurate</li> <li>3. Access the debug menu and print the action chain in an encoded string format</li> </ol>
<b>Pre-Requisites</b>	The application has been launched. A special login for the developer has been created with special permissions different from the normal student permissions.
<b>Expected Results</b>	The developer can log in through a unique username and password. They are then able to access a crash report generated by the program. They are also able to access a debug menu which shows the action chain from the gameplay menu printed out in a String format.
<b>Test Category</b>	Validation Testing
<b>Requirement</b>	Functional Requirement Developer Mode
<b>Automation</b>	Manual
<b>Date Run</b>	31 Mar 2024
<b>Pass/Fail</b>	Pass
<b>Test Results</b>	The user can log in as a developer and access the desired features. They are also able to access all the features of the teacher and student. Allowing them to use the program like any other user, just with some extra permissions.
<b>Remarks</b>	Developer mode has been implemented and works as desired.

<b>Test Case Name</b>	Error Handling Test
<b>Test Case Description</b>	This test is to ensure that the program can handle incorrect inputs and not crash.
<b>Test Steps</b>	<ol style="list-style-type: none"> <li>1. Log in to the game</li> <li>2. Try to input commands that are not correct. Observe what happens.</li> <li>3. Use the app in a way that it was not intended to try and crash it. Observe if any crashes occur.</li> <li>4. Close the app and open Task Manager to see if any background processes remain.</li> </ol>
<b>Pre-Requisites</b>	The application has been launched. The user has an account to log into.
<b>Expected Results</b>	The app tells the user that the inputs are incorrect. The incorrect inputs do not cause the app to crash. It is impossible to test for every possible case that may cause the app to crash, but for the ones we do test the app should not crash. Just return to the main menu. When the app is closed, there should not be any remaining processes going on in the background.
<b>Test Category</b>	Validation Testing
<b>Requirement</b>	Functional Requirement Error Handling
<b>Automation</b>	Manual
<b>Date Run</b>	30 Mar 2024
<b>Pass/Fail</b>	Pass
<b>Test Results</b>	The app can handle the incorrect inputs we tested without crashing. There are no background processes left over when the app is closed.
<b>Remarks</b>	The app can handle errors as intended.

<b>Test Case Name</b>	Progression Screen Test
<b>Test Case Description</b>	This test it to ensure the progression screen properly shows the student's progression through the game.
<b>Test Steps</b>	<ol style="list-style-type: none"> <li>1. Log in to the game to an account that already has some amount of progress through the levels.</li> <li>2. Navigate to the progression screen from the main menu.</li> <li>3. Ensure that the screen shows the progression through the game achieved by the student.</li> </ol>
<b>Pre-Requisites</b>	The program is booted up. There is an account with some level of progression through the game.
<b>Expected Results</b>	The user can see the progression through the game that they have previously achieved.
<b>Test Category</b>	Validation Testing
<b>Requirement</b>	Functional Requirement Progression (Screen)
<b>Automation</b>	Manual
<b>Date Run</b>	30 Mar 2024
<b>Pass/Fail</b>	Pass
<b>Test Results</b>	The progression through the levels is properly displayed on the progression screen. This will also allow it to be seen in teacher mode.
<b>Remarks</b>	The progression screen is implemented and working as intended.

<b>Test Case Name</b>	Pause Menu Test
<b>Test Case Description</b>	This test is to ensure that there is a pause menu accessible during the gameplay.
<b>Test Steps</b>	<ol style="list-style-type: none"> <li>1. Log in to the program.</li> <li>2. Start a new game.</li> <li>3. Pause the game after the game has been started.</li> <li>4. Open the settings screen. Ensure it has the desired elements.</li> <li>5. Navigate back to the pause menu.</li> <li>6. Open the tutorial screen. Ensure it has the desired elements.</li> <li>7. Save the game from the pause menu.</li> <li>8. Navigate back to the main menu.</li> </ol>
<b>Pre-Requisites</b>	The game is booted up. The user has an account.
<b>Expected Results</b>	The user can access all the mentioned screens. The screens are fully functional and the user can navigate back to the pause menu from the screens. The user can save their progress so that they can resume their run. The user can easily navigate back to the main menu from the pause screen.
<b>Test Category</b>	Validation Testing
<b>Requirement</b>	Functional Requirement Pause (Menu)
<b>Automation</b>	Manual
<b>Date Run</b>	30 Mar 2024
<b>Pass/Fail</b>	Pass
<b>Test Results</b>	The screens are all implemented and functional. The save game function works and we can navigate back to the main menu.
<b>Remarks</b>	The pause menu is functioning as desired.

<b>Test Case Name</b>	Settings Menu Test
<b>Test Case Description</b>	This test is to ensure the settings menu works and can change the settings.
<b>Test Steps</b>	<ol style="list-style-type: none"> <li>1. Log in to the game.</li> <li>2. Navigate to the settings menu from the main menu.</li> <li>3. Change the colorblind mode and ensure that it changes.</li> <li>4. Change the volume and ensure that it changes.</li> <li>5. Navigate back to the main menu.</li> </ol>
<b>Pre-Requisites</b>	The program is booted up. The user has an account.
<b>Expected Results</b>	The user can change the above settings and notice a difference in the application. The user can easily navigate back to the main menu from the settings menu,.
<b>Test Category</b>	Validation Testing
<b>Requirement</b>	Functional Requirement Settings (Menu)
<b>Automation</b>	Manual
<b>Date Run</b>	30 Mar 2024
<b>Pass/Fail</b>	Pass

<b>Test Results</b>	It is possible to adjust the settings in the menu as intended. The navigation back to the main menu is seamless. The menu is functional.
<b>Remarks</b>	The settings menu is implemented and works as intended.
